

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	22 September 2026
Team ID	
Project Name	Online Complaint Registration
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

1. Problem Statement Definition

How might we bridge the gap between citizens and civic administration by providing a secure, efficient, and scalable digital platform for registering, managing, assigning, and tracking civic complaints in real time?

2. Brainstormed Idea Groups

- **User Interface Features:** Modular and responsive UI components built using React, React Hooks, and client-side state management to provide an intuitive interface for citizens, administrators, and complaint agents.
- **Secure Authentication Features:** Role-based authentication using JSON Web Tokens (JWT), password encryption, and protected middleware to secure restricted routes and provide separate access for citizens, agents, and administrators.
- **Complaint Management Features:** Centralized complaint management dashboard allowing administrators to view, update, prioritize, assign, and delete complaints while enabling agents to access assigned complaints and update their status.
- **Agent Management Features:** Administrative agent management system allowing administrators to create multiple agent accounts, provide login credentials, and assign complaints to specific agents for resolution.

3. Idea Prioritization Matrix

- **High Importance / High Feasibility:** JWT authentication, complaint registration and tracking, admin complaint management, agent assignment, status/priority updates, and role-based dashboards.
- **High Importance / Lower Feasibility (Future Enhancements):** Real-time notifications, GPS-based complaint tracking, image uploads, AI-based complaint prioritization, and municipal system integration.
